PHP And MySQL Project On E-Learning Management System

This project **E-Learning Management System** has been developed on **PHP and MySQL**. We are providing **best php projects free download** (<https://www.freeprojectz.com/php-projects>) with source code for student purpose. We can develop **simple php mysql project** (<https://www.freeprojectz.com/php-projects>) code for students. The main objective for developing this **E-Learning Management System Project in PHP** is provide a user friendly environment to provide knowledge and give every one a chance to learn. E-Learning provides innovative courses directly to you. Take any class, any time you want, anywhere you want, with no additional software to download—all you need is an internet connection. Study at your own pace and access your course when it is convenient for you. This project E-learning can be helpful to all students to improve their knowledge. In this E-Learning system you will able to add student in a class, upload file, add Course, Department, Subject. It has also a form validator and a Responsive Design compatible in your Mobile Phone and Table. This project provides a lot of features to manage in very well manner. We also provide **e-learning project report in php**. This project contains a lot of advance modules which makes the back end system very powerful. We have developed many modules in this projects. Student can easily **free download php projects** (<https://www.freeprojectz.com/php-projects>) can be used as a final year academic projects for students.

I have attached the Screens and demo of the project below the description. Look into for more details.

Modules and Description of E-Learning Management System students:

Activity Logs Module :

The main objective for developing this module is to manage the activity logs. So all activity logs will be managed by admin. Here students can get **php projects with database free download** (<https://www.freeprojectz.com/php-projects>) .

Features of Activity Logs Module:

- Admin can manage the activity logs
- Admin can edit/delete the activity logs
- Admin can see the list of all activity logs
- Teacher can see his activity logs

Class Module :

The main aim of this module is provide all the functionality related to Classes. This Class module is the main module in this project **E-learning Management System** which has been developed on **PHP and MySQL**. We provide full **free download php projects** (<https://www.freeprojectz.com/php-projects>) with source code. It tracks all the information and details of the Classes.

Features of Class Module:

- Admin can add new classes
- Admin can see the list of classes details
- Only admin can edit and update the record of the classes
- Admin will be able to delete the records of the classes
- All Classes forms are validated on client side using JavaScript

Teacher Module :

The main objective of this module is provide all the functionality related to Teacher. It tracks all the information of the Teacher. We have developed all type of CRUD (Create, Read, Update and Delete) operations of the Teacher. This is a role based module where admin can perform each and every operations on data but the Teacher will be able to view only his/her data, so access level restrictions has also been implemented on the students. Here students can get **free php projects with source code and database** (<https://www.freeprojectz.com/php-projects>) .

Features of Teacher Module:

- Admin can add new Teacher records
- Admin can see the list of Teacher details
- Only admin can edit and update the record of the Teacher
- Admin will be able to delete the records of the Teacher
- All Teacher forms are validated on client side using JavaScript

(tel: +918470010001)

(<https://api.whatsapp.com/send?>

The main aim for developing this module is to manage the assignment. So all assignment will be managed by admin. Student gets complete project [simple php mysql project \(https://www.freeprojectz.com/php-projects\)](https://www.freeprojectz.com/php-projects) in our website Freeprojectz.com.

Features of assignment Module:

- Admin can manage the assignment
- Admin can edit/delete the assignment
- Admin can see the list of all assignment
- Teacher can see his assignment

Departments Module :

The main objective for developing this module is to manage the Departments. So all Departments will be managed by admin. Here students can get [free php projects with source code and database \(https://www.freeprojectz.com/php-projects\)](https://www.freeprojectz.com/php-projects) .

Features of Departments Module:

- Admin can manage the Departments
- Admin can edit/delete the Departments
- Admin can see the list of all Departments
- Teacher can see his Departments

Events Module :

The main aim of this module is provide all the functionality realted to Events. It tracks all the information and details of the Events. We provide full [free download php projects \(https://www.freeprojectz.com/php-projects\)](https://www.freeprojectz.com/php-projects) with source code.

Features of Events Module:

- Admin can add new events
- Admin can see the list of events details
- Only admin can edit and update the record of the events
- Admin will be able to delete the records of the events
- All events forms are validated on client side using JavaScript

School Year Module :

The main objective for developing this module is to manage the School Year data wise. So all School Year will be managed by admin. Admin can see the list of all the School Years and filter it according to the Teacher. Here students can get [php projects with database free download \(https://www.freeprojectz.com/php-projects\)](https://www.freeprojectz.com/php-projects) .

Features of School Year Module:

- Admin can manage the School Year
- Admin can edit/delete the School Year
- Admin can see the list of all School Year
- Teacher can see School Year

Subjects Module :

The main purpose for developing this module is to Subjects. So all Subjects will be managed by admin and Teacher will be able to see Subjects. Student get easily [project in php free download \(https://www.freeprojectz.com/php-projects\)](https://www.freeprojectz.com/php-projects) .

Features of Subjects Module:

- Admin can manage the subjects
- Admin can edit/delete the subjects
- Admin can see the list of all subjects

Students Module :

The main purpose of this module is provide all the functionality realted to students. It tracks all the information and details of the students. We have developed all type of CRUD (Create, Read, Update and Delete) operation of the students.

Features of Students Module:

- Admin can add new students

[_ \(tel:+918470010001\)](https://api.whatsapp.com/send?phone=918470010001)

[_ \(https://api.whatsapp.com/send?](https://api.whatsapp.com/send?phone=918470010001&text=Hello+Team%2C%0A+++I+am+interested+to+know+more+about+the+below+project.+Kindly+share+me+fu)

[projects%2Fphp-mysql%2Fe-learning-management-system\)](https://api.whatsapp.com/send?phone=918470010001&text=Hello+Team%2C%0A+++I+am+interested+to+know+more+about+the+below+project.+Kindly+share+me+fu)

- Admin can see the list of students details
- Only admin can edit and update the record of the students
- Admin will be able to delete the records of the students
- All students publication forms are validated on client side using JavaScript

Event Module :

The main purpose for developing this module is to event. So all event will be managed by admin and Teacher will be able to see event. Student get easily [free download php projects \(https://www.freeprojectz.com/php-projects\)](https://www.freeprojectz.com/php-projects) with source code and database.

Features of Event Module:

- Admin can manage the movie lanuage
- Admin can edit/delete the event
- Admin can see the list of all event

Functionality performed by Admin user:

These are the functionality performed by the admin users.

- Login For Admin
- Forgot password for Admin
- Edit Profile For Admin
- Change Password For Admin
- Logout Functionality
- Dashboard for Admin User
- **Manage Activity Log**
 - Adding New Activity Log
 - Edit the Exiting Activity Log
 - View details of the Activity Log
 - Listing of all Activity Log
- **Manage Teacher**
 - Adding New Teacher
 - Edit the Exiting Teacher
 - View details of the Teacher
 - Listing of all Teacher
- **Manage Class**
 - Adding New Class
 - Edit the Exiting Class
 - View details of the Class
 - Listing of all Class
- **Manage Assignment**
 - Adding New Assignment
 - Edit the Exiting Assignment
 - View details of the Assignment
 - Listing of all Assignment
- **Manage Department**
 - Adding New Department
 - Edit the Exiting Department
 - View details of the Department
 - Listing of all Department
- **Manage Event**
 - Adding New Event
 - Edit the Exiting Event
 - View details of the Event
 - Listing of all Event
- **Manage Files**
 - Adding New Files
 - Edit the Exiting Files
 - View details of the Files
 - Listing of all Files
- **Manage Student**
 - Adding New Student
 - Edit the Exiting Student
 - View details of the Student
 - Listing of all Student

(tel: +918470010001)

(https://api.whatsapp.com/send?

- Edit the Existing School Year
- View details of the School Year
- Listing of all School Year
- **Manage Subject**
 - Adding New Subject
 - Edit the Existing Subject
 - View details of the Subject
 - Listing of all Subject
- **Reports of the project E-Learning Management System**
 - Report of all Activity Logs
 - Report of all Teachers
 - Report of all Classes
 - Report of all Assignments
 - Report of all Departments
 - Report of all Events
 - Report of all Files
 - Report of all Students
 - Report of all School Years
 - Report of all Subjects

Functionality performed by Teacher user:

- **Teacher Registration** : Any Teacher can register on wesbite using the registration module.
- **Teacher Login** : This is the login form, from where Teacher can login into the system
- **Teacher Add Class** : This is Teacher Add Class form.
- **Teacher Assignments Add** : This is the Teacher Assignments Add form of the project.
- **Teacher Class** : This is the Teacher Class in this project.
- **Teacher Event** : This is the Teacher Event where Teacher will be able to add event and see event report.
- **Teacher Send Message** : This is the Teacher Send Message form where Teacher will be able to send message.
- **Teacher Quiz Screen** : This is Teacher Quiz Screen form where teacher add quiz and see quiz report.
- **Change Password** : This is the cahnge password module from where cTeacher change his account password.

Functionality performed by Student user:

- **Student Registration** : Any Student can register on wesbite using the registration module.
- **Student Login** : This is the login form, from where Student can login into the system
- **Student View Announcement Screen** : This is Student View Announcement Screen.
- **Student Assignments Report** : This is the Student Assignments Report form of the project.
- **Student Compose Message Screen** : This is the Student Compose Message Screen in this project.
- **Student Event Screen** : This is the Student Event where Student will be able to see event report.
- **Student Inbox Screen** : This is the Student Inbox Screen form where Student will be able to see message.
- **Student Quiz Screen** : This is Student Quiz Screen form where Student see quiz report.
- **Change Password** : This is the cahnge password module from where cStudent change his account password.

Static Pages and other sections :

These static pages will be available in project E-Learning Management System

- Home Page with good UI
- Home Page will contain an animated slider for images banner
- About us page will be available which will describe about the project
- Contact us page will be available in the project

Technology Used in the project E-Learning Management System

We have developed this project using the below technology

- HTML : Page layout has been designed in HTML
- CSS : CSS has been used for all the designing part
- JavaScript : All the validation task and animations has been developed by JavaScript
- PHP : All the business and frontend logic has been implemented in PHP
- MySQL : MySQL database has been used as database for the project
- Apache2 : Project will be run over the Apache2 server

Supported Operating System

PHP and MySQL Server Project on Online Grading System This project Online Grading System has been developed on PHP and MySQL. The main objective for developing this project is to managing to calculate the average grades of a student.. University or schools, worldwide educators are following few grading systems like GPA and CGPA. It can used to calculate the marks of a student through online. It helps to describe how to manage grading system, give grading, results of grading. The purpose of the project is to build an application program to reduce the manual work for managing details through internet. This application has a good appearance and is very easy to operate. It is very simple and easy to access at PHP. It is a very simple source code. This project provides a lot of features to manage in very well manner. This project contains a lot of advance modules which makes the back end system very powerful.

PHP Projects on Shopping Cart System (/node/1892)

Posted on Tuesday, May 24, 2016 - 13:01

PHP and MySQL Project on Shopping Cart System This project Shopping Cart System has been developed on PHP and MySQL. The main objective for developing this project Shopping Cart is very important part of any online store, it not only allows user to accumulate list of items for final purchase, but also calculates total amount of all the products. This project has been developed on latest technology PHP and MySQL. An Online Shopping Store which will allow formal and informal merchants in developing countries to advertise and sell their goods on the internet. This would permit rural communities to make their wares available to the rest of the world via the World Wide Web. There is a seprate interface for admin section by which admin can manage all the administrative task. This application has a good appearance and is very easy to operate. It is very simple and easy to access at PHP. It is a very simple source code. This project provides a lot of features to manage in very well manner. This project contains a lot of advance modules which makes the back end system very powerful.

PHP Projects on Content Management System (/node/1891)

Posted on Tuesday, May 24, 2016 - 12:55

PHP and MySQL Server Project on Content Management System This project Content Management System has been developed on PHP and MySQL. The main objective for developing this project is to managing content refers to creating, editing, archiving, publishing, collaborating on, reporting, distributing website content, data and information. Users can get the complete information about the any types of content from the Internet. It also provides time to time current information related to content. This project is meant to ease the process of adding and modifying new content to a webpage. It is used to add, edit, and delete content on a website. The purpose of the project is to build an application program to reduce the manual work for managing details through internet. This application has a good appearance and is very easy to operate. It is very simple and easy to access at PHP. It is a very simple source code. This project provides a lot of features to manage in very well manner. This project contains a lot of advance modules which makes the back end system very powerful.

PHP Projects on Student Information System (/node/1890)

Posted on Tuesday, May 24, 2016 - 12:36

PHP and MySQL Project on Student Information System This project Student Information System has been developed on PHP and MySQL. The main objective for developing this project is to manage Student details, prospective Students, Student Marks Details, Student Attendance Records and all the Students related data. The project Student Information System is used to save all the reports about students and their academics performances. This system is very useful for schools, colleges and universities. Students Information System project which has various modules which is helpful for administration to efficiently manage student's details. This project is a student-level data collection system. This application has a good appearance and is very easy to operate. It is very simple and easy to access at PHP. It is a very simple source code. This project provides a lot of features to manage in very well manner. This project contains a lot of advance modules which makes the back end system very powerful.

PHP Projects on Student Forum System (/node/1889)

Posted on Tuesday, May 24, 2016 - 12:30

PHP and MySQL Projects on Student Forum System This project Student Forum System has been developed on PHP and MySQL. The main objective for developing this project is to provides gives information about various programming languages, general knowledge related questions, information etc. This Project gives a web portal where students can share information with other students form all over the world. Student Forums allow for different learning styles. Those students more focused and effective after school hours can engage at times more suitable to their learning aptitudes. The idea of forum has been adapted from lots of forum in many websites. It also provides for students time to time current status information related about many forums. It is very simple and easy to access at PHP. It is a very simple source code. It saves our time and money. This application has a good appearance and is very easy to operate. This project provides a lot of features to manage in very well manner. This project contains a lot of advance modules which makes the back end system very powerful.

PHP Projects on Ticket Reservation System (/node/1888)

The purpose of the project is to build an application program to reduce the manual work for managing reservation tickets. Ticket Reservation System will be easy to use and can be used by any person. This application has a good appearance and is very easy to operate. It is very simple and easy to access at PHP. It is a very simple source code. This project provides a lot of features to manage in very well manner. This project contains a lot of advance modules which makes the back end system very powerful.

PHP Projects on Internet Banking System (/node/1887)

Posted on Tuesday, May 24, 2016 - 12:06

PHP and MySQL Project on Internet Banking System This project Internet Banking System has been developed on PHP and MySQL. The main objective for developing this project is to managing online banking for Balance Enquiry, Funds Transfer to another account in the same bank, Request for cheque books, Mini statements etc. Internet banking project help to export and manage all data and money management at concurrent manner. It can help for customers can access the banks website for viewing their Account details and perform the transactions on account as per their requirements. It also provides time to time current status information related to bank. You can check your balance, last transaction, print statements, purchase anything and pay directly from your account with the help of credit card. At present all over the world most of the banks are using internet banking system. This application has a good appearance and is very easy to operate. It is very simple and easy to access at PHP. It is a very simple source code. This project provides a lot of features to manage in very well manner. This project contains a lot of advance modules which makes the back end system very powerful.

PHP Projects on PHP Project on Student Information System (/node/1084)

Posted on Thursday, June 4, 2015 - 12:56

Objective of PHP Project on Student Information System The main objective of the PHP Project on Student Information System is to manage the details of Exams, Logins, Profiles, Student, Fees. It manages all the information about Exams, Courses, Fees, Exams. The project is totally built at administrative end and thus only the administrator is guaranteed the access. The purpose of the project is to build an application program to reduce the manual work for managing the Exams, Logins, Courses, Profiles. It tracks all the details about the Profiles, Student, Fees. Functionalities provided by PHP Project on Student Information System are as follows: Provides the searching facilities based on various factors. Such as Exams, Profiles, Student, Fees College Management System also sells the employees details online for students details, employees details, courses. It tracks all the information of Logins, Courses, Student ect Manage the information of Logins Shows the information and description of the Exams, Profiles To increase efficiency of managing the Exams, Logins It deals with monitoring the information and transactions of Student. Manage the information of Exams Editing, adding and updating of Records is improved which results in proper resource management of Exams data. Manage the information of Student Integration of all records of Fees. Report generation: It generates the report on Exams, Logins, Courses Provide filter reports on Profiles, Student, Fees You can easily export PDF for the Exams, Courses, Student Application also provides excel export for Logins, Profiles, Fees You can also export the report into csv format for Exams, Logins, Fees Limitation of PHP Project on Student Information System Excel export has not been developed for Courses, Student due to some criticality. The transactions are executed in off-line mode, hence on-line data for Exams, Logins capture and modification is not possible. Off-line reports of Exams, Profiles, Fees cannot be generated due to batch mode execution. Input Data and Validation of PHP Project on Student Information System All the fields such as Exams, Profiles, Fees are validated and does not take invalid values Each form for Exams, Logins, Courses can not accept blank value fields Avoiding errors in data Controlling amount of input
